

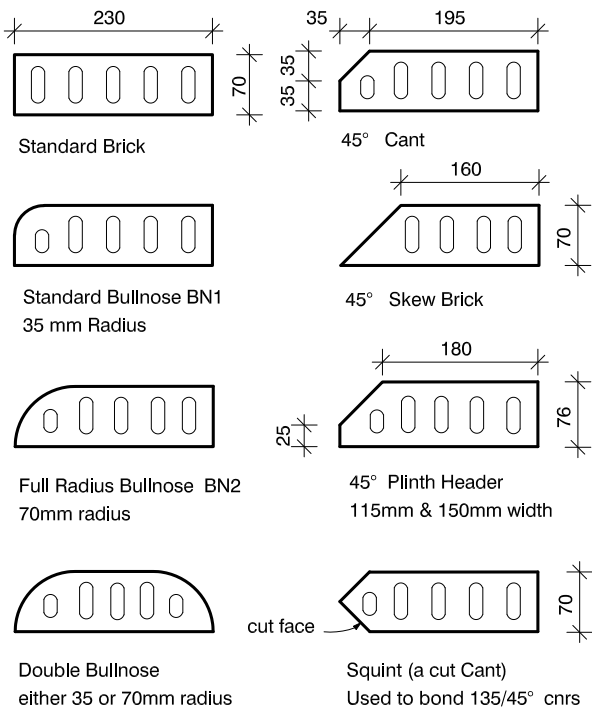

FIG. 101 SPECIAL SHAPED BRICKS

All measurements are nominal

NOTES:

1. Before including any special shaped bricks in your design, make sure they can be manufactured in the brick you have selected eg, Special bricks cannot be manufactured with a rumbled finish, only a smooth or possibly textured finish.
2. Order Special Shaped Bricks at least 6-8 weeks prior to requiring them. Where possible ensure they are manufactured at the same time as the standard bricks to maintain consistency of colour.
3. Most Special Shaped bricks are made to order and are not held in stock.
4. The ability to produce Special Shaped bricks and the cost may be volume dependant.
5. When specifying bricks such as Cants, Plinths, and Skews endeavour to specify 45 degree, although 30 and 60 degree from the horizontal are possible.
6. Squints are used to provide a bonded corner, avoiding a vertical joint where a wall in plan view has a 135/45 degree angle. Detail on plans. Order Cants - cut on site. Not available in all bricks
7. Special Shaped bricks can be used in either the vertical or horizontal position.
