

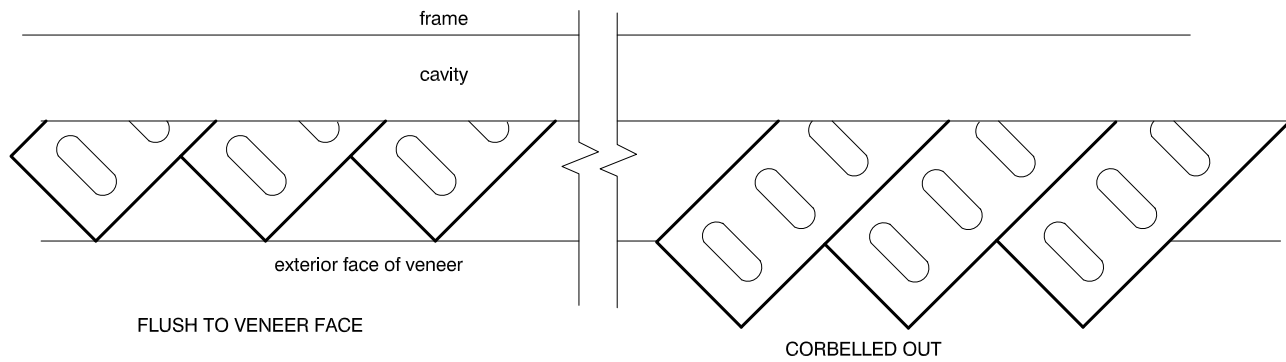

FIG. 104 DOG TOOTHING

PLAN DETAIL

NOTES:

1. Provides an interesting single line detail sandwiched between normal stretcher courses, under windows, up the rake of a gable, along brick fences. The changing light creates good shadow effects.
2. Dog tothing can be flush to the face or corbelled out as illustrated. Consider how holes will be finished if visible.
3. The bricks are normally laid at 45 degrees to the face, but this is not critical, and could be laid at any angle
